Rules

2-4 people.
Better to play offline but if want to play online they can

Goal:
Use memory, tactics and luck to get the least count/points out of everyone playing to win the game.

How to play:

Starting deck: Each person gets 4 cards placed in a square shape (2 forward, 2 backward so top left and right as well as bottom left and right). They are placed face down so no one can see the cards. The rest of the cards are placed in the middle face down as a deck so you can't see them. Take the top card of the deck and place it in the center so you can see its number. This is the starting card where you will place unwanted cards each turn and the deck are the playing cards you take from. At the start of each game, they can look at both of the bottom(right and left)/closest to person cards and must remember them.

Points: Each of the numbers of the card is its respective points. For example: 2 = 2 points and 10 = 10 points. A jack, queen and king are also 10 points.
-Exceptions: 1) Any Ace = 1 points since there is no card to represent 0. 2) A joker = -2 points. 3) A red king so diamond or hearts king = 0
Mathematically the lowest points a someone can have is -4 due to 2 jokers in a standard deck of cards.

Powers: Certain card numbers have certain powers.
-Numbers 7 and 8 are used to look at **one** of your cards so you flip the card so only you can see and try to remember the number and placing/where it is.
-Numbers 9 and 10 are used to look at **one** of the cards of one person of your choosing you are playing with and try to remember the number and placing/where it is.
-Jack and Queen are blind swaps - swap one of your cards (usually a high points number since you don't want it) with one of your choosing's person card (usually a lower points card since you want those with you). You can blindswap the cards even if you don't know yours or their card number or you can blindswap cards you've seen by using the number 9/10 powers so you know the number.
-Kings are look-look swaps - look at one of your cards, look at one of the cards of your choosing and swap if you want or don't swap if you don't want to. Can be used to get more information/numbers of cards even if you don't want to swap.

Playing: So the person who won the previous game starts this game. If this is the first game then people can rock-paper-scissors or do some game to figure out who starts. They pick the top card from the deck in the middle, look at the number - if they want it (usually a lower number card), then swap it with one of the cards they have that they don't want (usually a higher number card). The swapping happens by placing the card they want/picked up from the deck face-down in the same place as the card they are swapping with. The card that

they don't want anymore (one of the cards they currently have) gets placed face-up at the center over where the starting card is if you are the first person or over the previous card. If you don't want to swap, then just place the card you picked up from the deck straight to the middle over the cards there and use the power of the card number if possible. The person on your **right** plays next and the game goes in a **counter-clockwise** direction.
-**Important**: You can only use the powers of the cards if you don't swap with one of your cards, and place the card directly from picking it up from the deck to placing it over - now you can use the power (for example: if number 7 is placed then look at one of your cards - preferably one of the top 2 cards since you don't know what they are otherwise the bottom 2, if you have forgotten what number they are: have the choice to choose any)
-**Turn Ending**: Now that you've either swapped with a card you do not want OR placed the card directly over the middle, your turn has ended and the person on your right does the same thing next.

Special scenarios: This is where remembering/memorising your and other peoples' card number + where/positioning of the card comes into hand.
-**Jumping in (Type 1)**: This happens when anyone playing places a card in the middle that they don't want. If the number of the card is the same as one/more of the number you have, then you can "jump in" and place your cards in the middle decreasing the number of cards you have = less points.
-**Important**: Jumping in **does not** count as a turn so you can still play if your turn is next and the next person still plays. You **cannot** use the powers of the card if you jump in
Example 1: It is your turn to play, you pick a card from the top of the deck in the middle and see that it is number 4. You know your top left card is also a number 4. So instead of taking the number 4 since it is a lower number and swapping it with a higher number like number 10 which you know you have in bottom right, what you can do is put the number 4 you took from the top card of the deck directly in the centre and then place the number 4 you have in the top left in the middle over the previous top 4 decreasing you count by a card and 4 points.
-**Important**: Now you could have gone with the other option of swapping the 4 you picked up with the number 10 you know you have in the bottom right, decreasing your points by 6. There is no wrong way to play the game and it comes down to strategy.
Example 2: Someone else is playing, they pick up a card from the middle. Now they can either place that card directly since they don't want to swap or they can take that card and swap it with one of the cards they have. Now if one/more of the cards you have for example: you have 2 number 7s that you know is the same number as the number of the card that they placed (number 7), then you can jump in by placing both of your number 7 over that person's card.

-**Jumping in 2 (Type 2):** This happens when you know the card of your opponents (known by using the powers of numbers 9 and 10 to look at their cards in previous turns) when they don't know or by getting their card faster than they get it. So what happens is if you/someone puts a card in the middle and it turns out someone has that same number, then you can take that person's card - place it down in the middle and give them one of your cards (usually a high number card). Used to sabotage your opponent's score and also decrease the points + card count you have.

-**Important:** This **does not** count as a turn and the person on the right still plays after the turn is finished. You **cannot** use the powers of the card if you/someone else jumps in.
Example 1: Two turns ago, you used the number 9 you picked from the deck and directly placed in the middle to use the power and look at person 2's top left card which was a number 8 which you remember. Now, person 3 picks up a card from the deck and does not want it so places it up in the middle and you see that it is a number 8. Now what you can do, is take person 2's number 8 - place it up in the middle and then give him the Jack you have in your bottom right which you saw when the game started and still have it increasing his score by 10 points and decreasing your card + points
Example 2: Lets say you have a 5 in your bottom right and person 3 also saw that you have a 5 by using the powers of 9 or 10 in one of his previous turns. Now, its person 3 turn - he picks up a card from the middle, see the number and puts in directly in the middle. Now before you see that the number is a 5, he reaches out and takes your number 5 and places it down as well giving you one of his cards.
-**Important:** Whoever touches the card first, has the right to place the card in the middle. For example: As long as the opponent touches the person's card before the person then they have the right to take the card and put it in the middle even if the person pushes the opponent's hand away/steals it from them.

-**Swapping card:** Instead of taking the top card from the deck in the middle, you have the option of taking the card placed by the person right before you and swapping in with one of the cards you have and this will be considered your turn. The advantage is you can take a low count card if they put the whole card down but the disadvantage is that everyone in the game knows what number you took and where you placed it giving people the opportunity to do **jumping in style 2**.

Winning: Now I will explain how to win the game. So after however many turns, if a person feels like they have the lowest points then they can "call" on their turn .
-Important: only on their turn, not someone else. Furthermore, calling is only possible if you don't pick up the card from the deck and play with it. Jumping in does not count so if you jumped in previously, you can still call on your turn. Essentially, as soon as the previous person's turn ends and it's your turn then you can "call". So now everyone in the game gets one more turn to play **but they cannot** with the cards of the person who has called and also with the anyone to the left of them since those people are have played their final turn already
-**Important:** can interact with people on the right (like using powers) until the person who called since they still have the chance to play their last turn. After everyone has played, all the cards are turned face-up and points are calculated for each person. The person with the lowest points wins the game!
-**Important**: If the person who called and another person have the same points, then the person who called wins since they took the risk!

Special Scenario: In the case that a person has no cards, lets say they jumped in via style 1 or style 2 with their final/last card hence dont have any then the person has a points score of 0 and will call when it's their turn. Before the person with no card's turn comes around and they call, anyone else can call but after the person calls on their turn, everyone gets 1 final turn like usual.

Mistakes: Now to make the game fun, everytime someone makes a mistake, they have to take the top card of the deck and place it face down on the cards they have. This is a punishment increasing the card count and numbers and not good as the person also don't know that card's number (it is possible they pick up a low number card or a joker but they won't know until they look and it is also unlikely)

List of mistakes:

-Skipping someone's turn and playing instead

-Placing not the same number on a card when jumping in (for example: there's an 8 in the middle and someone forgets where their 8 is and places a 4 by accident)

-Using the powers wrong (For example: using a Jack to look-look swap which only a king can do)

-Looking at their top 2 cards at the start of the game or looking at their cards throughout the game when they are not supposed to. Should only look at the bottom two cards at the start of game once.

-Using the powers of the same card multiple times (For example: using the powers of 8 to look at two of their cards when they can only look at one)

-Moving their card positions around (**Important:** It is very important that everyone keeps their card positions the same from the start of the game to the end, even when swapping 2 cards - the new card has to take the position of the old card and during the game, cards cannot be switched around to trick people. Game has to be consistent and fair.

-Placing their card face-up when they are supposed to be face-down so they and other people cannot see.

Important: A person can have as many as 8 cards (4 cards at the start + 4 mistakes) but after that, they automatically forfeit and should look at the rules again
